

Class Section:		33:010:275:10
Student Name(s):		Kelsey Mehigan, Anna Mattos, Akash Bhujle, Valeria Melgar, and
Background:		The Fashionable Leather Company manufactures two product lines and supplies only after receiving orders from customers, and therefore has a large number of dimensions including by region, by product line, and by quantity (see in the Data worksheet).
Instructions:		This workbook contains 3 worksheets: Cover Sheet, Additional Instructions, and Data. Only answers entered in the Cover Sheet will be graded. The Cover Sheet worksheet contains all of the questions as well as a chapter that each question is most related to. However, there is a chapter number. Make sure that your calculations match the check number. The system will only accept a whole number. If you try to enter 54.5 you will get an error. The Additional Instructions worksheet contains 1) a description of each question, 2) a description of the questions. The majority of this project relies on using formulas. The Data worksheet contains the raw job costing data from the company. It lists the quantities of a given product. A more detailed description of the Data worksheet, as needed, before creating your pivot tables.
Chapter	Points	
2	5	Question 1: What is the total direct material used (in dollars) Answer: 231,572.04
2	5	Question 2: What is the total direct labor used (in dollars) Answer: 267,125.49
4	5	Question 3: The budgeted manufacturing overhead rate is \$8.24 per direct labor hour (Hint: A job that incurs \$100 of direct material cost will incur \$824 of manufacturing overhead). What is the total manufacturing OH applied in the East region? Answer: 823,789.62 Check: The total manufacturing OH applied in the East region is 823,789.62
3	5	Question 4: How many jackets were sold in the East region? Answer: 2,977

2	5	Question 5: Which product line generated the most revenue? Answer: <table><tr><td>Jacket</td></tr></table>	Jacket			
Jacket						
2	5	Question 6: What is the total gross margin in each of the two regions? Answer: <table><tr><td>North</td><td>South</td></tr><tr><td>171,906.95</td><td>221,371.91</td></tr></table>	North	South	171,906.95	221,371.91
North	South					
171,906.95	221,371.91					
3	5	Question 7: Which Job ID generated the smallest gross margin? Answer: <table><tr><td>971</td></tr></table>	971			
971						
4	5	Question 8: Assume the actual indirect manufacturing overhead incurred was \$804,677.70. 8a. What was the actual total overhead incurred? Answer: <table><tr><td>804,677.70</td></tr></table>	804,677.70			
	804,677.70					
	2.5	8b. What is the difference between actual total overhead and budgeted total overhead? (Hint: Actual total manufacturing overhead = \$804,677.70) Answer: <table><tr><td>-19,112.92</td></tr></table>	-19,112.92			
-19,112.92						
2.5	8c. Was the manufacturing overhead over or underapplied? Answer: <table><tr><td>Over Applied</td></tr></table>	Over Applied				
Over Applied						
4	10	Question 9: The budgeted period fixed costs for the year were \$4,495,788.42. What are the total variable costs for the year if the budgeted contribution margin is 60% of sales? Answer: <table><tr><td>4,495,788.42</td></tr></table>	4,495,788.42			
4,495,788.42						
3	12.5	Question 10: What is the average contribution margin per unit for jackets? Assume the fixed overhead costs are 60% of sales. (Hint: Divide the total contribution margin by the number of jackets sold.) Answer: <table><tr><td>8.92</td></tr></table> Check: The average contribution margin per jacket is \$8.92.	8.92			
8.92						
3	12.5	Question 11: Assume the contribution margin per unit for shoes is \$12.50. What is the total contribution margin for shoes if the sales mix is 1 jacket to 1 shoe? (Hint: Be sure to use the correct sales mix.) Answer: <table><tr><td># of Bundles</td><td># of Shoes</td></tr><tr><td>9,122</td><td>27,366</td></tr></table>	# of Bundles	# of Shoes	9,122	27,366
# of Bundles	# of Shoes					
9,122	27,366					

7	10
10	
Total Points	100

Question 12: The company has separate material and quantity variances. Assume the following standard price and quantity:

For shoes, assume the budgeted cost per yard is \$10.00.

For jackets, assume the budgeted cost per yard is \$12.00.

That is, the budgeted cost of direct materials is \$10.00 per yard for shoes and \$12.00 per yard for jackets.

(Hint: Calculate the direct material price variance and the direct material efficiency variance.)

12a: What is the direct material price variance?

Answer: DM Price Variance (\$)

-6,766.80

12b: What is the direct material efficiency variance?

Answer: DM Efficiency Variance (\$)

16,974.21

Instructions and Background

Joey Fratacci

es (shoes and jackets) and operates in four regions (North, South, East, and West). The company buys direct materials and does not hold a material amount of inventory. The CFO asked you to analyze the company's performance for the year based on its manufacturing cost. The raw job costing data was exported into Excel from the company's accounting system.

Instructions, and Data. It is recommended that you add additional worksheets to perform your calculations, as well as

as spaces for your answers. The cells on this worksheet are locked. You can only edit the gold colored cells. Cells are locked in many of the chapters. Column C lists the point value for each question. Many questions include either multiple choice or true/false questions. The gold colored answer cells are restricted to accept only certain number formats. For example, the answer must be a whole number. If you enter a decimal, you will receive an error message.

1) a link to the dataset, 2) links to basic Excel video tutorials, and 3) additional instructions and hints on how to calculate new columns in a table of data and then using PivotTables to analyze the data.

company's accounting system. Each row of the data table corresponds to one job. Each job can include orders for shoes and jackets. The data for the company's accounting system is included in the Additional Instructions tab. It is recommended that you calculate additional columns in the Data tab.

Questions

dollars) for shoes?

orders) in the South region?

overhead is 25% of direct material dollars.
(Direct materials will be allocated \$25 of manufacturing overhead.)
Calculate the total manufacturing cost for the North region (in dollars)?

North region was \$198,832.

region?

Revenue?

in 4 regions?

East	West
155,094.14	170,421.77

margin?

Hourly rate for the year was 24.42%. Manufacturing overhead is allocated using direct material dollars.
What was the overhead rate during the year?

What is the difference between actual manufacturing overhead and the applied manufacturing overhead?
(- total applied manufacturing overhead.)

Underapplied?

Variable costs are \$456,708, and the fixed portion of the budgeted total manufacturing overhead is \$494,274.

What is the total variable cost per unit?
(Hint: The total variable costs is the total direct material costs + total direct labor costs + total manufacturing overhead.)

What is the variable cost per unit for shoes?
30% of the applied overhead and there are no period variable costs.
(Round your answer for shoes by the total number of shoes sold.)

What is the contribution margin per unit for shoes? It is \$84.82.

What is the break-even point in units for shoes is \$8.25 and the contribution margin per unit for jackets is \$79.50. What is the break-even point in units?
(Round your break-even number of bundles up to the nearest whole number.)

of Jackets
9,122

quantity standards for the shoes and jackets product lines.

quantities:

1 square foot of leather (standard price) is \$10.34 and the budgeted feet of leather per pair of shoes produced is 1.78

1 square foot of leather (standard price) is \$19.00 and the budgeted feet of leather per jacket produced is 12.38.

Materials to produce 1 jacket is \$235.22 (\$19.00 per ft * 12.38 ft per jacket).

Additional Instructions

Question #
General
General
Question 8b
Question 10

Question 11

Question 12

Description
A unique identification number for each job. This ID number cannot be repeated.
A unique identification number for each customer. A customer can be associated with multiple jobs.
Identifies the region of the corresponding job. Possible values are North, South, East, and West.
The product produced and sold for the job. Possible values are shoes or jackets.
The number of shoes or jackets produced and sold for the job. Note: An order for 2 shoes is for 2 pairs of shoes.
The direct material cost per foot of leather. (e.g., the price of 1 foot of leather.)
The number of feet of leather used per unit of output. (e.g. 12 feet of leather to produce 1 jacket).
The hourly wage rate for manufacturing employees. (e.g., Employee is paid \$31 /hour).
The number of direct labor hours used to produce 1 unit of output. (e.g., The employee uses 1.05 hours to produce 1 jacket.)
The sales price per unit. (e.g., Each jacket is sold for \$383.)

Additional Information
Remember that expenses are subtracted from revenue when calculating gross margin, contribution margin, etc. Therefore, it may be easier to represent the columns which contain expenses as negative numbers.
The majority of this project relies on using basic Excel formulas and PivotTables. The links included above will be helpful if you are unfamiliar with Excel.
Remember the applied manufacturing overhead was calculated as part of Question 3.
Remember the contribution margin equals revenue - variable costs.

The total fixed costs are reported in Question 9. There are no variable period costs.

The total direct material price variance and the total direct material efficiency variance is the sum of each job's variances.

A simple way to calculate the answer is to calculate the direct material price variance and the direct material efficiency variance for each job. Then, use a PivotTable to sum all of the variances calculated for each job.

This approach requires that you include the direct material standard price and standard quantities for each job within the Data worksheet. You can do this by creating a lookup table (use the table at the right). Fill the gold cells of the lookup table with the standard price and quantities listed in the Cover Sheet worksheet and use the XLOOKUP function in the Data worksheet to create the two new columns.

Standard Price and Quantity Lookup Table

Product	Standard Price	Standard Quantity
JACKET	19	12.38
SHOES	10.34	1.78

Job ID	Customer ID	Region	Product	Units Produced and Sold	Cost per Foot of Leather
